

# IST Eco Code

Designing the sustainable world that we need

The International School of Turin recognises its responsibility to protect and regenerate the environment while modelling and sharing the principles of Permaculture.

## Action Plan

IST is committed to:

**Biodiversity and Nature:** Ensuring that students at IST are connected to the natural environment, to organic growing practices and to increasing levels of biodiversity on campus.

**Energy Reduction:** Increasing energy efficiency and renewable energy use.

**Water Conservation:** Reducing water consumption, protecting water sources and harvesting rainwater and in this way educating the community on water conservation.

**Waste Reduction:** Implementing the 5 Rs: reduce, re-cycle, re-use, repair and recover.

**More Sustainable Transport:** Adopting sustainable commuting and travel practices including car-pooling and encouraging cycling to school.

**Sharing IST Sustainability Practices:** Educating other schools and organisations such as UNESCO and the ILO about our Eco School practices and the principles of Permaculture.

**Climate Change Mitigation:** Examining the impact the school and its community has on the environment and what positive changes can be made to limit the environmental impact.
